# 1. Third network for campus housing

Trevor Long will discuss a pilot network in campus housing aimed at providing a better gaming experience for residents.

## 2. Wireless update on refresh plans

Trevor Long will talk about plans for refreshing the wireless environment.

## 3. Cloud identity

Clayton Barlow will be discussing the concept of a unified cloud identity and how it pairs with our on-premise IAM solutions to provide a hybrid identity solution that will reduce risk and improve overall user experience. He will ask ANTC to consider some possible direction for Architecture and IAM to follow to avoid the risk of having multiple pockets of IT spinning up their own instances without a strategic, comprehensive approach.

## 4. IAM – Sailpoint user access review demo

The University's Information Security Office (ISO) is implementing a new process that will soon require all managers at The University of Utah to review their employees' access to the following applications: Cactus, Epic, Lawson, and PeopleSoft (Campus Solutions – HE, Human Resources – HR, and Financials – FS). In the future, other applications will be added for access review. The access review process will occur every four months and is required in order to comply with [Policy 4-004, Rule 4-004D](#).

UIT, ITS and Campus HR managers participated in testing the new process in a training environment. In the near future, this process will move to all managers who have at least one employee with elevated access in these applications.

Subhasish Mitra will perform a quick demo of the process and answer questions. For those who cannot make the meeting, [there is a training video available](#). This video will be the main training mechanism for all managers who must take part in this process.

If you have feedback, questions, or comments after the ANTC meeting, you can send them to [iam-info@lists.utah.edu](mailto:iam-info@lists.utah.edu).

## 5. Voting membership
