Summary

1. UMail security enhancement

Corey Roach, Chief Information Security Officer, will review options for enhancing security on email to mitigate phishing attacks. Action item.

Option 1: Disable all legacy protocols to UMail leaving only 'Modern Auth' and enable Duo MFA.

Option 2: Create a separate segment in Exchange for UMail users with access to PHI and restrict access to their email to U of U IPs, VPN, and Citrix.

The committee voted to approve ISO's recommendation: Implement option 2 as soon as practically feasible. Begin investigating implementing option 1 in the near future.
