

## ***IPv6 will be disabled from Wi-Fi networks on 2/6***

*You're receiving this email because you're subscribed to UIT's public email list.*

As part of response and mitigation efforts following an IT security incident, UIT will disable Internet Protocol version 6 (IPv6) from University of Utah wireless networks on **Saturday, February 6, 2021 at 11:00 p.m.** IPv6 is the latest version of Internet Protocol, a method of identifying and locating devices across the internet.

Wired network connectivity will **not** be affected. After the change, the resulting IPv4-only Wi-Fi configuration is not expected to impact wireless network traffic, production IT systems, or most end user services, with the possible exception of some gaming consoles.

An IPv4/IPv6 dual stack wireless network configuration may be reenabled by UIT after issues with IPv6 are addressed.

If you notice any issues with Wi-Fi connectivity after the change, your local IT support staff may be able to assist, or you may contact your respective central help desk:

- UIT Help Desk (801-581-4000, option 1)
- ITS Service Desk (801-587-6000)
